Cat Urine Color Chart

What it means

- **Light yellow**: Normal urine of a well-hydrated cat

- **Dark yellow**: Possible dehydration, it may be prudent to feed a moist diet and take steps to increase water consumption (water fountains and other measures to increase drinking).

- **Brown**: Most likely there is blood in the urine, caused by UTI, cystitis, crystals, autoimmune disease, blood parasite, kidney disease, or cancer - prompt medical attention is indicated.

- **Red**: Fresh blood in the urine also indicates possible UTI, cystitis, crystals, autoimmune disease, blood parasite, kidney disease, or cancer - prompt medical attention is indicated.
